DETAILED ACTION

Claims 1-6, 8-15, 17-25, and 28 pending in the instant application.

Response to Amendment

I. Applicants had previously elected Group I, claims 1-30, drawn to compounds and their pharmaceutical compositions, methods of preparation and methods of use, according to formula (I), wherein Ar is phenyl:

The Examiner notes with appreciation the cancellation of the non-elected subject matter from the claims.

Claim Rejections - 35 USC \$ 112

2. Claims 7 and 16 previously rejected under 35 U.S.C. 112, first paragraph, as being reachthrough claims. In view of the cancellations of said claims, the Examiner withdraws the rejections to the claims.

Claim Rejections - 35 USC \$ 101

3. Claims 7 and 16 previously rejected under 35 U.S.C. 101 as being reach-through claims. In view of Applicants' cancellations, the Examiner withdraws the rejections.

Claim Objections

4. Claims 26, 27, 29, and 30 previously objected to as being substantial duplicates. Applicants have cancelled the claims, therefor the Examiner withdraws the objections.

Art Unit: 1626

Allowable Subject Matter

Page 3

5. In view of the Applicants' amendatory changes and cancellations, claims 1-6, 8-15, 17-25, and 28 are allowable, as newly renumbered claims 1-24. The following is an examiner's statement of reasons for allowance:

This invention relates to novel substituted chroman compounds and derivatives, pharmaceutical compositions, and methods of using said compounds as agonists of the beta-3 adrenoreceptor. The instant application is a continuation of U.S. Application No. 10/131,448, which has been found allowable and is now U.S. Pat. No. 6,660,752. The allowable compounds in this case are limited to compounds according to Formula (I) of claims 1-6, wherein Ar is phenyl, and the allowable methods are limited to a methods of using said compounds or pharmaceutical compositions to treat beta-3 adrenoreceptor-mediated conditions, of method claims 8-15 and 17-24. Certain chroman derivatives are known in the art as being effective beta-3 adrenoreceptor agonists, and are also useful for lowering triglyceride and cholesterol levels, effective for treating patients suffering from physiological conditions such as hyperglycemia, obesity, hypertriglyceridemia, hypercholesterolemia, impaired glucose tolerance, cardiovascular conditions, ocular hypertension, glaucoma, urinary disorders, and prostate disease. However the aspect of preparing the instant claimed beta-3 agonists, which contains a central phenylhydroxy-amine moiety linked to a substituted chroman ring, is novel and unobvious. After a. thorough search, the closest of prior art, Connell et al, US 6,469,031 was found to teach similar carboxyl substituted chroman derivatives as beta-3 adrenoreceptor agonists (please see Examples 20-26). However the compounds of the instant application contain a "Y" substituent in the 4-position of the chroman ring, which may represent halogen, nitro, sulfonyl, an amide, etc., while the compounds of the '031 reference may only contain a carboxyl group on the

Application/Control Number: 10/666,903

Art Unit: 1626

chroman ring, which distinguishes them from the instant application. Connell et al also do not teach or render obvious the instant claimed chroman derivatives as beta-3 agonists for the treatment of impaired glucose tolerance, gastrointestinal disorders, hypertriglyceridemia, urinary disorders, etc. Therefore, the prior art does not fairly suggest the instant claimed pyridyl-amine-chroman compounds, or methods of using them. Support for beta-3 adrenergic receptor agonists' efficacy for lowering high-density lipoprotein levels, as well as treating obesity, diabetes, hyoertriglyceridemia, gastrointestinal disorders, etc. can be found in the attached articles, for example the Iatropoulos et al abstract, the Cederberg et al abstract, the Manraj et al abstract, the Proenza et al abstract, and the JP 08-198866 abstract.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Telephone Inquiry

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Janet L. Coppins whose telephone number is 571.272.0680. The examiner can normally be reached on M-F 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph K. McKane can be reached on 571.272.0699. The fax phone number for the organization where this application or proceeding is assigned is 571.273.8300.
